## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-6 and 8-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Czajkowski et al (U.S. Patent 6,503,649). Regarding claims 1, 10, and 11, the reference is directed to an apparatus comprising an assembly (30) of individual fuel cell stacks (32) connected in parallel (see Figs. 2 and 3). A load is connected at output 56 (see col. 9, line 52). Regarding claims 1-4, the fuel cell stacks are automatically connected and disconnected from the load via switches (i.e., bridges) (53) in response to the load demand (see Fig. 3; col. 9, line 20 et seq.; col. 4, line 55; col. 5, line 65 et seq.). Regarding claim 5, the optimum load point for greatest thermal efficiency is ignored to maximize electrical output. Regarding claim 6, the remaining fuel cells are modulated through a DC-AC converter (see Fig. 3). Regarding claims 8 and 9, the individual fuel cell stacks may have different power outputs, operating parameters, and nominal load points (see col. 10, line 55 et seq.). Regarding claims 1, 10, and 11, the PEM fuel cells used in the reference inherently produce heat.

Thus, the instant claims are anticipated.

*Allowable Subject Matter*

3. Claim 7 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter:

Claim 7 recites, among other features, that a temperature is measured in a region of interconnection of the thermal load to the assembly, and the fuel cell system is controlled (i.e., individual units are turned on and off) in response to the measured temperature. Czajkowski, the closest prior art, fails to teach or fairly suggest this feature. Accordingly, claim 7 contains allowable subject matter.
